Professional Summary

Software Developer with a game development background, now transitioning toward data science and data engineering. Experienced with C#, Python, SQL, Unity, Android, TensorFlow Lite, REST APIs, debugging, software testing, and data-driven application workflows. Strong foundation in building interactive systems, processing sensor and event data, analyzing runtime behavior, and developing reliable user-facing applications.

Technical Skills

C#, Python, SQL, JavaScript, Java, Kotlin, ASP.NET Core, .NET Web API, REST APIs, TensorFlow Lite, Android Studio, Wear OS, Unity, Git, Debugging, Log Analysis, Issue Triage, Software Testing, Documentation, Data Analysis, Scikit-learn, HTML/CSS, Azure Fundamentals, Cloud Computing

Experience

Full-Cycle Software / Game Developer Intern, Live Red Foundation (Remote) Jan 2026 – Jun 2026

- Developed Unity and C# gameplay systems for an interactive educational application focused on decision-making, resilience, and user behavior.
- Implemented event triggers, NPC behavior, traffic systems, player interactions, and structured logging workflows to support behavior-based insights.
- Recorded player decisions, retries, timestamps, movement, and mission behavior as structured application data for future reporting and analysis.
- Debugged gameplay, scene flow, and performance issues by reviewing runtime behavior, reproducing bugs, and documenting fixes.

Game Developer Intern, Universal Phoenix Group LLC (Remote) Sep 2025 – Present

- Developed and tested Unity gameplay features while troubleshooting build issues, runtime errors, and feature defects across test environments.
- Collaborated in Agile sprints, peer code reviews, and feedback cycles to triage issues and deliver fixes aligned with project milestones.
- Integrated external APIs for VR interaction features and documented implementation details for team review.

Unity Developer Intern, Quleep Pvt Ltd (Remote) May 2021 – Apr 2023

- Developed gameplay mechanics, UI, avatar control, and environmental interactions using Unity and C#.
- Tested builds, reported 25+ bugs, documented defects, and worked through fixes across gameplay, assets, animations, and shaders.
- Created reusable scripts and supported feature iteration from prototype implementation through testing.

Projects

Predictive Stress Monitoring (Wear OS + Android + AI/ML) 2025

- Built an Android and Wear OS application that collected heart rate, accelerometer, gyroscope, and step data from a smartwatch.
- Trained and deployed a TensorFlow Lite model using 300K+ samples, then tested real-time inference and watch-phone communication.
- Implemented sensor buffering, activity filters, logs, and notification logic to identify patterns and reduce false positives during movement.

TRADEPLAY – Game Exchange Marketplace 2025 – Present

- Building an ongoing marketplace project for gamers to list, search, and trade physical games, consoles, and accessories.
- Designed product workflows for listings, item details, user profiles, trade requests, chat-style communication, and community discussion features.
- Strengthening software design, data modeling, search workflows, and structured product data planning through continued project development.

Parking Violation Prediction 2025

- Built a Python data science workflow to analyze parking violation records and identify patterns using structured public data.
- Performed data cleaning, exploratory analysis, feature engineering, and model evaluation using Python and Scikit-learn.
- Practiced repeatable preprocessing and predictive analysis workflows for real-world tabular datasets.

Economical VR Gaming Experience (Unity + Google Cardboard) Mar 2023

- Developed an affordable Android VR game using Unity, C#, Google Cardboard API, Android phones, and low-cost controller hardware.
- Tested gameplay systems, enemy AI, UI flow, performance, Windows builds, and Android VR builds with participant feedback.
- Optimized the game using batching, occlusion culling, LODs, and profiling to support smooth gameplay on accessible hardware.

Education

M.S. in Computer Science, George Mason University Aug 2023 – May 2025 GPA: 3.60

B.Tech in Computer Science, GITAM University, India May 2019 – Apr 2023 GPA: 3.52

Certifications

- *Post Graduate Certificate Program in Software Engineering for Data Science* – IIIT Hyderabad / Great Learning
- *Data Analysis with Python* – IBM
- *Introduction to Big Data with Spark and Hadoop* – IBM
- *Cloud Computing Foundations* – Duke University
- *Software Development Processes and Methodologies* – University of Minnesota
- *Introduction to Software Testing* – University of Minnesota
